

JUDGE W. H. BENSON, of Pinal, is developing a great deal of strength as a candidate for the position of Probate Judge, and the prospect now is that he will be elected by a very large majority. Mr. Benson has resided in Pinal just eleven years and came direct from Maine with the late Chas. G. Mason, one of the locators of the Silver King mine. He has ever since resided in Pinal and first engaged in merchandising with Solon Mason, and upon the death of Mr. Mason the business was closed out and Mr. Benson engaged in teaching and also in the cattle business. Since 1879 he has been a justice of the peace and was deputy assessor and tax collector under Sheriff Gabriel and Fryer. For more than six years he has held the position of Clerk in the Silver King company's office at Pinal and his abilities are fully recognized by the management of that company. Mr. Benson married a daughter of the late S. W. Foreman and is a permanent resident of this county. His honesty and integrity are above suspicion and his qualifications for the important position of Probate Judge are of a superior order. He will surely be elected and will prove a highly efficient and capable officer and one of whom the people of Pinal county will have good reason to feel proud.

A WELL DEFINED case of hydrophobia has recently occurred at Santa Fe, New Mexico, the victim being a child of six years who was recently bitten by a rabid dog. This painful circumstance explodes the claim to immunity from that malady in New Mexico, while we can produce proof that the rabies sometimes occur in Arizona. Several years ago the coyotes near the Pima Indian reservation were afflicted by rabies and several dogs that were bitten by them developed the disease but with the singular characteristic that the animals did not acquire the usual aversion to water during the paroxysms of the disease. Mr. H. G. Ballou, who resides nine miles west of Florence, killed two of his valuable dogs while they were suffering with rabies, having been bitten by coyotes, and their symptoms left no doubt as to the character of the complaint. There is no longer any doubt about the possibility of rabies fully developing under favorable circumstances in this climate and the usual precautions should be taken to prevent their spreading by promptly killing every beast showing any signs of having them.

The recent state elections in Vermont have shown large Republican gains and the same indications of the coming national contest the effect of their example is anything but cheering to the party in power. If such a ratio of republican gains extends to other states that have been regarded as doubtful, the inevitable result will be the resumption of power by the republicans. But these early "straws" are quite unreliable in determining the results of the future.

The splendid output of the Silver King mine for the month of August and the prospective increase during the current month, is like a brilliant revival of its days of greatness. Under the careful and prudent management of Superintendent Macy the mine and plant have been placed in splendid condition for economical and effective working and the future prospects of the property are very promising.

The demand for Judge Thurman as a political speaker is rapidly wearing the old gentleman out. At a recent gathering in New York city he spoke but a few words, excused himself and was carried from the rostrum for medical treatment. He is doing a work that younger and stronger men find it difficult to accomplish, and he is likely to break down under the strain and excitement.

Talk efforts to have Alex. Goldenson, the San Francisco murderer of Mamie Kelly, declared insane, have come to naught, and if the sentence of the court was carried out, the criminal suffered the extreme penalty yesterday.

GEN. HARRISON's letter of acceptance was given to the public last Tuesday. It is quite brief—scarcely one fourth the length of that of his opponent—but it contains all that is necessary to be said upon such an occasion.

The early frosts have appeared in the eastern states and destroyed the ripening crops. The warm summer is still with us in Arizona and the frosts are still months away.

The yellow fever scourge in Jacksonville, Florida, has defied every effort to suppress its ravages and the daily bulletins sent out show a woeful state of affairs.

THERE are no party candidates in Pinal county this year. It will be an independent race and among the several candidates there is plenty of good material for wise selections.

SHERIFF FRYER's many friends are expressing his cause with a warmth that insures success and he will roll up a handsome majority at the polls upon the day of election.

FROM the favor of President Cleveland's letter of acceptance, we infer that he "got" onto it just a little too long.

THERE has been considerable speculation quite recently as to the ultimate destination of the new railroad now under construction from San Diego, via Yuma, to Phenix, and the shaping of railroad affairs leads us to the conclusion that it will be extended up the Gila valley to connect with the Santa Fe system at Silver City, New Mexico. It is an open secret that after the first of October all the through Pacific coast traffic of the Santa Fe road will go to Deming and thence over the Southern Pacific track. At present there is a wide gap between the Deming terminus and the California lines of the Santa Fe, which must be closed as soon as possible and this connecting link must be built through Southern Arizona. Now it is reasonable to suppose that if they build a road connecting with their Pacific coast system, into the Gila valley, the remaining short gap to Silver City will be found necessary to give them a through line. By following the general course of the Gila river a good grade can be secured to Silver City and the amount of prospective local traffic will give them great encouragement in selecting such a route. The entire length of the Gila valley must eventually become the garden of the world whose productions will not only support a dense local population, but furnish traffic for the most convenient railroad. There are large and valuable mines of gold, silver and copper, all along the river east of Florence, and the coal fields near San Carlos would also add to the inducements for the selection of this route. Altogether this is the most plausible solution of the problem of the ultimate course of the road that has yet been advanced and as it necessarily places Florence on its direct line, we indulge the hope that the management of the Santa Fe system will find it to their interest to traverse the rich valley of the Gila across Arizona in constructing their trunk line to the Pacific coast.

THE lines of the Territorial executives are not always cast in pleasant places, particularly since the change of administration has scattered the kind influences that formerly surrounded the object of such political favor. The governor of New Mexico found the roses strewn in his path to be full of piercing thorns, and our own executive has doubtless often thought that official atmosphere is disagreeable and unwholesome. But up in Dakota the democrats are formulating actual charges against their governor and will endeavor to secure his removal. We can discern in this general disaffection a decided flavor of envy and disappointed ambition. There were too many that hungered and thirsted after the glory and perquisites of office for the amount of available pay and, of course, some of them still nurse the craving appetite still unquenched and must occasionally utter signs of distress. But under all the smoke there must be some embers of fire and there is no doubt, that in some cases good pretexts will be found to substantiate the accusations openly charged. Whatever may be the causes that lead to it, the fact is quite apparent that he who accepts the position of a Territorial appointment, and more particularly that of chief executive, subjects to a crown of thorns that sooner or later will prove a torture to the flesh.

THERE is no room to doubt that southern Arizona will receive a large influx of new settlers during the coming fall and winter and that it is but the beginning of a tide of immigration that will eventually occupy every available portion of this favored section of the great west. We do not claim that our lands are equal in fertility and capability to those of other sections of our country, but we assert that they are superior to all others and, with a climate that is unsurpassed, the opportunities for the farmer and fruit grower are almost beyond belief. The fertility of the soil is augmented continuously by the sediment brought down the rivers in the irrigating waters, and the long, mild seasons afford a succession of crops that are not known elsewhere. Our fruits reach an earlier market than those from California, and the variety of our productions is unlimited. Added to all these advantages is a climate of rare geniality and an atmosphere of wonderful purity, and health and wealth will reward those who seek them in a rational way.

THE good reports continually arriving from the mining camps in the Casa Grande district are very encouraging and from present appearances a genuine mining boom has commenced. As the supply point for the various camps to the south, the town of Casa Grande must derive substantial benefits from this activity and become a place of importance.

THE Republican Territorial convention will meet in Tucson next Wednesday. While it is generally conceded by republicans as well as democrats that Hon. M. A. Smith will be re-elected Delegate to Congress by a largely increased majority, the convention will probably make a party nomination as a matter of form.

EVERY new survey of the Mexican boundary line gives another slice of territory to the United States. This is additional evidence that our country is growing.

AFTER all, the last for the spoils of office is the actuating motive of a very large portion of the most zealous partisans during a political campaign. If Belva Lockwood is not elected president she will sue Uncle Sam for breach of promise.

TRUE charity gives secretly to the needy without expectation of return or reward. The vain and ostentatious proffer of alms is an investment that is repaid in transitory human glory. The species that openly gives twenty dollars to the destitute sufferers from a devastating earthquake and ten thousand severely to the campaign corruption fund, lacks words to fitly designate its class.

THE question of the fuel of the future seems quite simple, especially for rural districts. The experience in Dakota is that the stalks of the sunflower become as hard as maple and make a hot fire, while the heads with the seeds are better than the best hard coal. One acre of sunflowers will supply one stove during the entire year in that land of blizzards.

WILLIAM WARNER, of Missouri, has been elected Commander-in-chief of the Grand Army of the Republic. He served in the 33d and 44th regiments of Wisconsin volunteers during the war and is the present Congressman from the fifth district of Missouri.

ABOUT BEN BUTLER, after having tested the virtues of all the various political parties, is this time attracted by the new articles of faith as propounded in the republican doctrine. His politics are somewhat like his eyesight—afflicted with strabismus.

THE democrats of New York have renominated Gov. D. B. Hill to succeed himself. His nomination was made by acclamation amidst the wildest enthusiasm.

ALL the impetuous voter asks of the Greenback party is to be let a loan.

President Cleveland's letter of acceptance was made public Sunday night. The letter is very lengthy and and treats principally with the subject of tariff reform. The President declares that the continuance upon the part of meeting the public expectations of such a scale of tariff taxation as draws from the substance of the people a large sum of money, largely in excess of the public needs, is surely something which in government based upon justice ought not to be tolerated. He continues "The revenue now remaining in the treasury not only forms a credit for the national debt, but its existence constitutes a separate and independent menace to the prosperity of the people. He states that the democratic party proposes to stimulate domestic enterprise by admitting raw materials free from duty, and he continues, "We have enlarged upon the crusade of free trade, for many years have been predicted upon the utmost care for the established industries and a zealous regard for the interests of American labor, and a sincere desire to relieve the country from injustice and from the dangers of a condition which threaten evil to all the people of the land."

A very simple method of training vicious horses was exhibited at West Philadelphia recently, and the manner in which some of the wildest horses were subdued, the Philadelphia Record calls astonishing. The first trial was that of a kicking or bucking mare, which the owner said had allowed no rider on her back for a period of five years. She became tame in a few minutes and allowed herself to be ridden about without a sign of her former wildness. The means by which the result was accomplished was by a piece of light rope which was passed around the front of the jaw of the mare just above the upper teeth, crossed in her mouth then secured back of her neck. It was claimed that no horse would jump or kick when thus secured, and that a horse after receiving the treatment a few times, will abandon his vicious ways forever. A very simple method was also shown of subduing a kicking horse could call a kicking horse. It consisted in connecting the animal's head and tail by means of rope fastened to the tail, and then to the bit, and then drawn tightly enough to incline the animal's head to one side. This, it is claimed, makes it absolutely impossible for the horse to kick on that side of the rope. At the same exhibition a horse which was passed around the front of the jaw of the mare just above the upper teeth, crossed in her mouth then secured back of her neck. It was claimed that no horse would jump or kick when thus secured, and that a horse after receiving the treatment a few times, will abandon his vicious ways forever. A very simple method was also shown of subduing a kicking horse could call a kicking horse. A very simple method was also shown of subduing a kicking horse could call a kicking horse. It consisted in connecting the animal's head and tail by means of rope fastened to the tail, and then to the bit, and then drawn tightly enough to incline the animal's head to one side. This, it is claimed, makes it absolutely impossible for the horse to kick on that side of the rope. At the same exhibition a horse which was passed around the front of the jaw of the mare just above the upper teeth, crossed in her mouth then secured back of her neck. It was claimed that no horse would jump or kick when thus secured, and that a horse after receiving the treatment a few times, will abandon his vicious ways forever.
